SECURITY REVIEW

- Raising \$250K SAFE to finish the Clio marketplace path, complete compliance readiness, and convert pilot conversations into signed revenue.
- Built for family-law litigators and forensic CPAs who need deterministic tracing, evidence integrity, and attorney-reviewable work product before discovery goes cold.

● PLATFORM_ONLINE

SAFE_RAISE_BRIEFING

> THE PROBLEM

Financial proof still dies in PDFs, spreadsheets, and late expert review.

Law firms can manage the case, but the money trail still has to be rebuilt by hand.

- High-conflict divorce cases turn on commingled accounts, asset movement, missing statements, hostile messages, and contradictions under oath.
- Traditional forensic review can take weeks, often starts too late, and produces static spreadsheets that are hard for counsel to verify or reuse.
- The legal record needs a faster evidence layer: traceable math, source-linked assumptions, and a clean dossier attorneys can actually review.

THE_PROBLEM

> THE PRODUCT

One encrypted command layer for case intelligence.

Exit Protocol turns scattered discovery into a defensible forensic position.

- Ingest statements, ledgers, court filings, crypto exports, messages, and supporting documents into a case workspace.
- Run deterministic LIBR tracing, entity mapping, contradiction review, evidence hashing, and narrative draft generation.
- Export an attorney-reviewable dossier with methodology notes, exhibits, calculations, and integrity checks organized for legal review.

THE_PRODUCT

> WHY NOW

The Clio marketplace path is open.

The legal workflow already has a system of record. Exit Protocol becomes the specialist forensic layer beside it.

- Clio converted the trial account into a free US developer account under vinay@exitprotocols.com.
- Clio confirmed the security review was approved and asked for the recorded integration demo plus App Directory listing assets.
- The integration path is clear: pull matter documents, run the forensic engine, and push the sealed dossier back into the same matter.

WHY_NOW

> WORKFLOW

Matter documents in. Forensic work product out.

The product does not replace legal judgment. It compresses the evidentiary preparation cycle.

- Connect a matter or upload discovery directly into the private case workspace.
- Normalize financial records, preserve source references, and calculate account-level tracing positions.
- Return a sealed PDF report, calculation ledger, hash verification record, and review notes for counsel.

WORKFLOW

> MARKET POSITION

Not case management. Not generic OCR. Not another dashboard.

A narrow forensic intelligence layer for the moment ordinary accounting fails.

- Clio owns matter workflow. Orolus and DocuClipper flatten documents. Forensic CPAs provide expert review.
- Exit Protocol sits between them as the deterministic analysis and work-product layer for high-conflict asset disputes.
- The wedge is intentionally sharp: family-law separate-property tracing, then adjacent commercial and bankruptcy disputes.

MARKET_POSITION

> CUSTOMERS

Built for firms and experts who already feel the pain.

The first buyer is not browsing for software. They have a case, a deadline, and messy financial records.

- High-asset family-law attorneys who need leverage before discovery hardens into positions.
- Forensic CPAs who want faster prep, cleaner assumptions, and repeatable work product.
- Private investigators and litigation support teams who need entity mapping, evidence vaulting, and contradiction detection.

CUSTOMERS

> MARKET SIZE

A narrow wedge into a large legal-financial workflow.

Start where the pain is acute, then expand into every dispute where money movement becomes evidence.

- The entry point is high-conflict family law: asset tracing, separate-property claims, hidden transfers, and expert-prep work.
- The adjacent market includes bankruptcy, commercial litigation, fiduciary disputes, fraud recovery, and post-judgment collection.
- Exit Protocol can start as a specialist report engine and mature into the trusted intelligence layer for financial discovery.

> BUSINESS MODEL

Start with reports, graduate into firm workflows.

The revenue model matches how legal buyers adopt specialist tools.

- Per-report purchases for urgent one-off case analysis and sample dossier generation.
- Monthly firm subscriptions for repeat case work, evidence vaults, integrations, and collaboration.
- Expert review and partner workflows for CPAs, litigation consultants, and legal service providers.

BUSINESS_MODEL

> PROOF

The product is already real enough to demonstrate.

This is not a slide-only concept. The system has working surfaces and generated work product.

- Live Django product with demo sandbox, case intelligence dashboard, financial accounts, entity resolution, evidence vault, secure comms, sentinel monitoring, and contradiction review.
- Generated forensic report template with LIBR calculations, transaction ledger, visual timeline, certification page, and methodology appendix.
- Clio developer and security approval reduces partnership risk and gives a concrete marketplace launch path.

PROOF

> DEFENSIBILITY

Deterministic math plus evidence provenance.

The value is not magic AI. It is controlled calculation, source linking, and human review.

- LIBR calculations are deterministic and reproducible, with assumptions exposed for attorney or expert review.
- Evidence records are organized with hash verification, chain-of-custody events, and source metadata.
- AI assists with summarization and drafting, while legal conclusions remain human-led and jurisdiction-specific.

DEFENSIBILITY

> GO TO MARKET

Pilot firms first. Marketplace second. Expert channel always.

Revenue starts with the people who can validate the work product under real pressure.

- Secure three signed pilot firms or forensic CPA partners with defined sample-case scopes.
- Record the Clio integration demo and submit App Directory assets once the flow is polished.
- Use sample reports and case walkthroughs as the conversion asset for attorneys, CPAs, and litigation support buyers.

> USE OF FUNDS

\$250K funds compliance, integration, and first revenue.

This is a focused seed-safe raise for company formation, trust readiness, and launch execution.

- Product and Clio integration: finish OAuth, matter document sync, report pushback, demo recording, and launch assets.
- Compliance and security readiness: entity operations, legal review, privacy/security posture, vendor agreements, and customer trust materials.
- Pilot acquisition and founder runway: direct outreach, expert partner onboarding, support, and rapid iteration from real cases.

USE_OF_FUNDS

> MILESTONES

A 90-day path from product proof to fundable traction.

The raise is designed to turn a working product into a repeatable sales motion.

- Days 0-30: finish entity, compliance basics, Clio demo flow, and pilot contracts.
- Days 31-60: complete three pilots, capture feedback, improve report credibility, and publish trust materials.
- Days 61-90: submit Clio listing, convert pilots into paid accounts, and prepare a stronger seed round narrative.

MILESTONES

> THE ASK

Invest in the forensic layer legal teams cannot get from case management.

A small SAFE now buys speed, compliance, and market access at the exact moment the product can be proven.

- Seeking \$250K on a founder-friendly SAFE to complete launch-readiness and sign the first revenue pilots.
- Capital unlocks the blockers that have already appeared: entity contracting, security/compliance review, and partner evaluation agreements.
- The near-term objective is not scale theater. It is signed pilots, validated workflow, and a market listing path.
